ACROSS

- 2 Specialized aerial hypha that produces spores
- 5 A hypha of a parasitic fungus that enters the host's cells, absorbing nutrition directly from the cytoplasm
- 6 A _____ hypha is a hypha that is imbedded in the material on which the fungus grows.
- 7 A thin covering of tissue
- 8 _____ digestion takes place outside of the cell.
- 9 A chemical secreted by a living organism that kills or reduces the reproduction rate of other organisms
- 11 A zygote surrounded by a hard, protective covering

- 12 An aerial hypha that asexually reproduces to make more filaments
- 13 The part of the fungus responsible for extracellular digestion and absorption of the digested food

DOWN

- 1 The anaerobic breakdown of sugars into smaller molecules
- 3 The result of sexual reproduction when each parent contributes half of the DNA necessary for the offspring
- 4 A chemical that provides both toughness and flexibility
- 9 An _____ hypha is a hypha that is not imbedded in the material upon which the fungus grows.
- 10 A filament of fungal cells
