Clues for “Histology: The Study of Tissues”

The Human Body: Fearfully and Wonderfully Made! – Module 2

ACROSS

- 2 _____ glands are exocrine glands that secrete without losing cellular material.
- 5 _____ glands are exocrine glands whose secretions are made up of disintegrated cells.
- 10 The chemical substance located between connective tissue cells is called the _____ matrix.
- 11 _____ glands are ductless glands that secrete hormones into the bloodstream.
- 12 Cells that do not regularly undergo mitosis but are able to if the need arises are called _____ cells.
- 13 Cells that provide structure or support for parenchymal cells are called _____ cells.

DOWN

- 1 Cells that provide the actual function of the tissue are called _____ cells.
- 3 _____ glands secrete substances outward through a duct.
- 4 Mature cartilage cells
- 6 Spindle-shaped cells that form connective tissue proper
- 7 Cells that undergo mitosis regularly and quickly are called _____ cells.
- 8 _____ glands are exocrine glands that have cytoplasm in their secretions.
- 9 Cells that cannot undergo mitosis are called _____ cells.
